

SKID PLATE FOR CF
MOTO 450
298690

298690-12

FEATURES

The CFMoto skid plate is built to help your bike slide smoothly over rocks, logs, whoops, and other natural terrain—ensuring a faster, more controlled ride. Engineered for maximum protection, it shields the frame, engine, water pump, crankcases, and footpeg areas from impact and debris.

Strategic openings near the back lighten the plate, improve airflow, and make it easier to rinse out mud and dirt. The design also helps prevent buildup by limiting mud and debris from collecting underneath. Weight: 1358g

PRODUCT DETAILS

96% Plastic | 4% Other

Made In: Italy
